Experience

Geometric Data Analysis Group (prof. Marina Meilă), University of Washington — *Seattle, WA*

Ph.D. Student Researcher — *Apr. 2017 - PRESENT*

- Proposed a versatile framework for topological feature discovery and semi-supervised edge flow learning from point cloud data
  - Presented a triplet-wise similarity kernel resembling the VR complex in computational topology
  - Proved the consistency of the discrete 1-Laplacian to its continuous counterpart (Hodge Laplacian)
  - Applied the method on molecular dynamics, oceanology, and COVID-19 pandemic data to study the propagation of the flow
- Studied a well-known defect of spectral embedding methods on manifolds with large aspect ratios (NeurIPS'19 [1])
  - Provided an efficient criterion based subset selection algorithm to produce independent coordinates for smooth embedding
  - Showed that the criterion, based on the projected volume ratio of the chosen coordinates, asymptotically converged to a KL divergence
  - Discovered the meaningful embedding for the galaxy and molecular dynamics datasets
- Created a tutorial of manifold learning on molecular dynamics (MD) simulation data [8]
- Developed a scalable manifold learning python toolkit for millions of points named `megaman` (`https://github.com/mmp2/megaman`)

Facebook — *Seattle, WA*

Machine Learning Intern — *Jun. 2020 - Sep. 2020*

- Developed deep learning models to optimize the click-through rate (CTR) based recommendation system for search ads placement
- Investigated various modeling techniques including transfer learning and multi-task learning

Microsoft Research — *Redmond, WA*

Research Intern — *Jun. 2018 - Sep. 2018*

- Proposed a large scale dynamic network model, based on the stochastic block model (SBM), to study the system evolution (a time series of graphs)
- Obtained the maximum a posteriori (MAP) estimator by auto-grad, enabling the model to be fit on networks with millions of vertices
- Presented a sampling based extension to causal impact, allowing the practitioners to determine the significance of the intervention
- Paper [3] accepted to KDD 2019 research track (acceptance rate 14.2%)
